

<p style="text-align: center;">◆</p> <p style="text-align: center;"></p> <p style="text-align: center;">◆</p> <p style="text-align: center;">◆</p> <p style="text-align: left;">Description</p> <p style="text-align: left;">The cap of this mushroom can grow from 5 to 20 centimeters wide; it mostly has a convex shape and is brown colored. The stipe has a white, or a yellowish coloration; it is a bit wider at the bottom and it has a ring. The gills are densely packed and short, and are mostly gray colored. The spore print has a brown color, sometimes there is also a slightly purple tone to it.</p> <p style="text-align: left;"> </p> <p>◆</p> <p style="text-align: center;">{HTML}

{/HTML}</p> <p>◆</p> <p style="text-align: left;">Edibility</p> <p style="text-align: left;">A very tasty species, which can be prepared in many different ways. It is known to have a taste similar to veal meat.</p> <p style="text-align: left;">◆</p> <p style="text-align: left;">Similar species</p> <p style="text-align: left;">There are certain toxic species that could be confused with this species, although most of these grow on stumps of coniferous trees and on their needle-like leaves. Because of that, these can be easily distinguished from Stropharia rugosoannulata.</p> <p>◆</p>
